Biology Section 18-2: Modern Evolutionary Classification ...

Modern Evolutionary Classification. Clades and Traditional Taxonomic Groups. A clade must be monophyletic. This means that it contains an ancestral species and all of its descendants, and no species that are not descendants of that ancestor. Cladistic analysis shows that many traditional taxonomic groups do form valid clades.

Section 18-2 Modern Evolutionary Classification(pages 451-455) This section explains how evolutionary relationships are important in classification. It also describes how DNA and RNA can help scientists determine evolutionary relationships. Introduction (page 451) 1. What traits did Linnaeus consider when classifying organisms?He tried to group

Section 18-2 Modern Evolutionary Classification

Evolutionary classification places organisms into higher taxa whose members are more closely related to one another than they are to members of any other group. The larger the taxon, the further back in time all of its members shared a common ancestor. In this system, organisms are placed into groups called clades.
