Book Series: Studies in Archaeology

Zooarchaeology is the study of human beings and their relationship to nonhuman animals. Research in this area involves the analysis of animal remains (also called faunal remains or archaeofauna) from archaeological sites, such as bone from amphibians, mammals, reptiles, birds, and fish, and shellfish such as lobster and mollusks.

Zooarchaeology - Anthropology - iResearchNet

Quantitative Paleozoology describes and illustrates how the remains of long-dead animals recovered from archaeological and paleontological excavations can be studied and analyzed. The methods range from determining how many animals of each species are represented to determining whether one collection consists of more broken and more burned bones than another.

Quantitative Paleozoology by R. Lee Lyman

Two research topics commonly addressed in zooarcheology that are ethnobiological include the study of past human diets (or subsistence strategies) and the study of past environments or landscapes that people lived within.
