Three Stages of Tooth Contact. The teeth of two gears during operation (or mesh) pass through three stages of contact: 1. Coming into mesh, initial contact occurs in the dedendum (lower) portion of one tooth (on the driving gear) and in the addendum (upper) portion of the mating tooth (on the driven gear).

The major cause of clutch failure is excessive heat. Excessive heat generated between the flywheel, driven discs, intermediate plate and pressure plate can cause the metal to flow and the material to be destroyed. If this occurs, the clutch can burst which can cause property damage, serious bodily injury or death.
